Waste Transfer Facility

The Waste Transfer Facility, operated by PML, provides an environmentally friendly, cost-efficient solution for the disposal of waste generated on the site. This on-site facility is located in the southern end of the site and is a proven successful sustainability initiative.

The facility allows waste to be separated into several streams, mainly organics, cardboard and timber which are diverted from landfill through recycling and reuse. All other non-segregated mixed waste are disposed at landfill.

PML provides plastic bins as waste receptacles for the purpose of disposing rubbish. Bins are colour coded for ease of waste segregation into individual streams for proper disposal. The facility processed approximately 3,200,000 kilograms of waste in the last 12 months and received over 32,000 individual loads. Approx. 58% of the waste was diverted from landfill through recycling and reuse.

The facility provides tenants a cheaper way of disposing of their waste along with the following benefits:

- It reduces the number of trucks entering the site, resulting in a safer working environment; and
- It keeps the site cleaner and more hygienic, reduces vermin and the amount of debris sitting idle for lengthy periods of time.
